

# Collaborate. Automate. **Innovate.**

➤ Beyond the chatbot, beyond the IDE: AI in my CI/CD

Presented by **Justine Gehring | Gologic**  
For **Confoo 2026**

**GOLOGIC**

# Justine Gehring

Head of AI Business Line

An expert in artificial intelligence, I develop AI solutions aimed at improving the productivity of IT teams. Educated at McGill and Mila, I specialized in Machine Learning for Code. As a speaker and co-author of the book "AI for Mass-Scale Code Refactoring and Analysis" (O'Reilly, 2024), I also serve on the program committee of TechDebt and will be responsible for the industry track in April 2026.

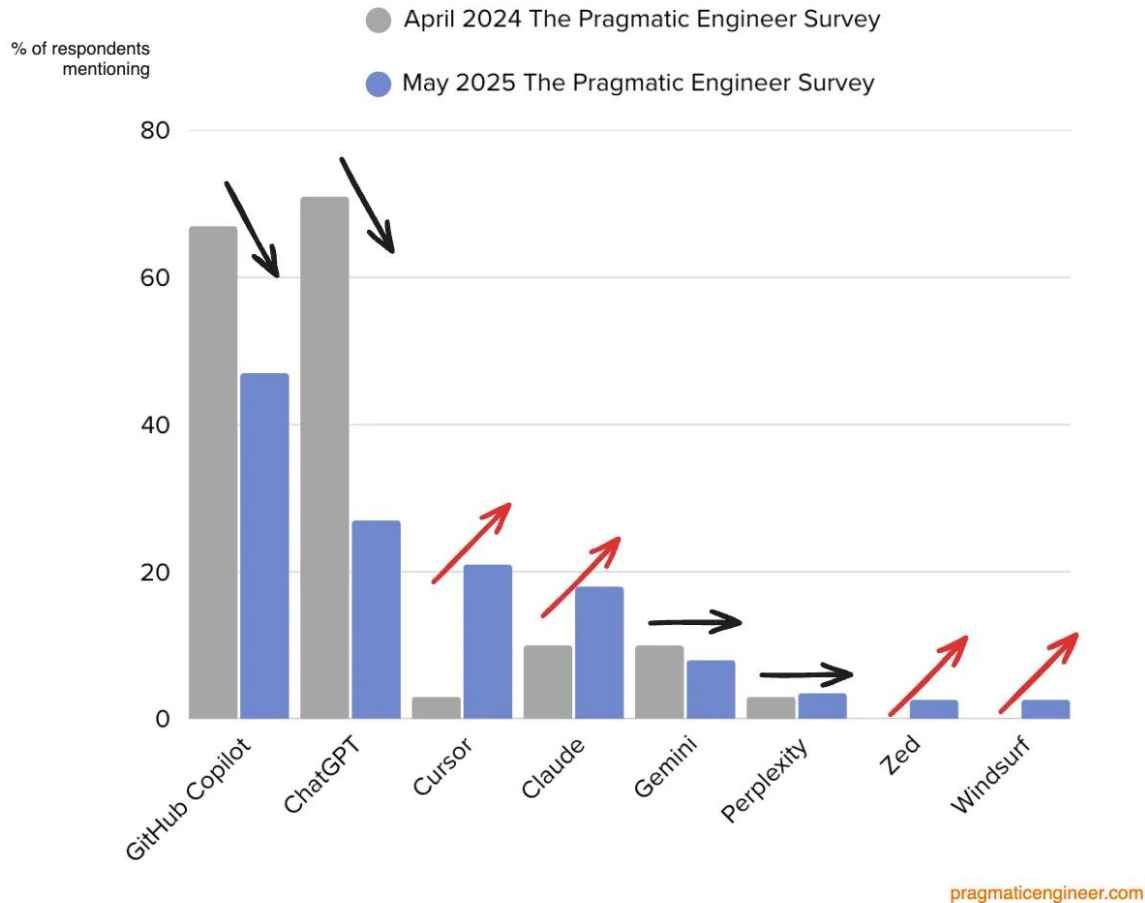

# What is this talk *not* about

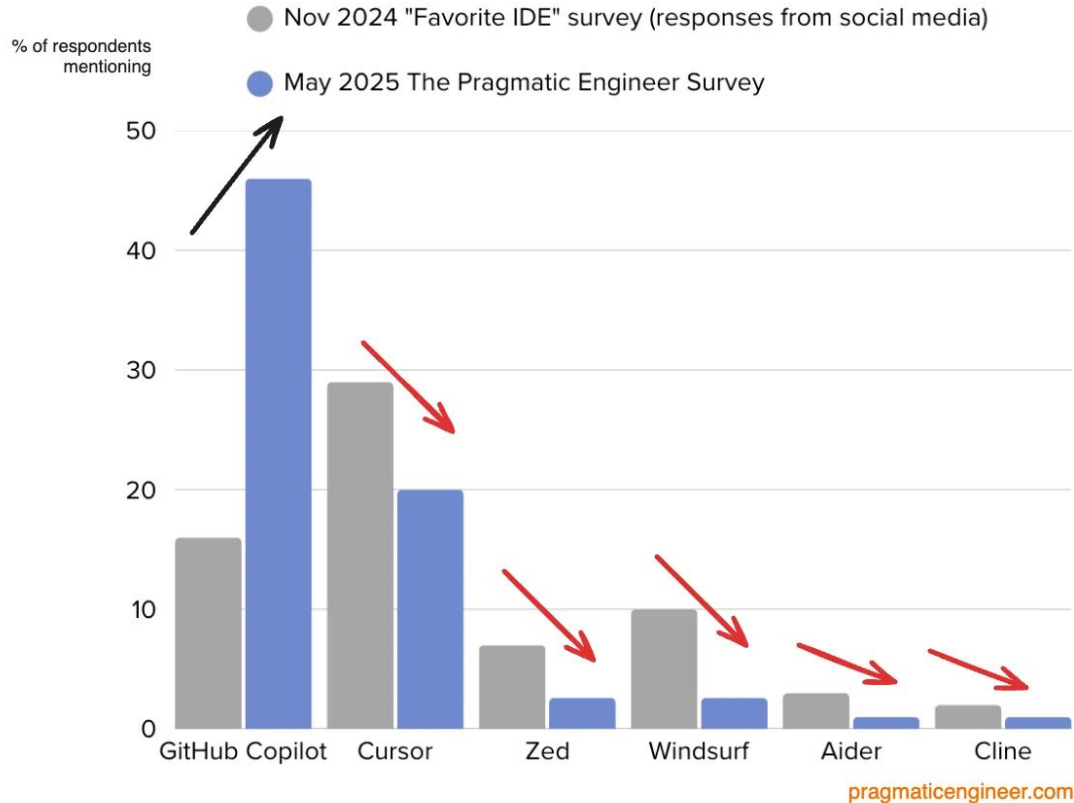

end-to-end agents to  
automate the whole  
process of CI/CD

# Most mentioned AI tools

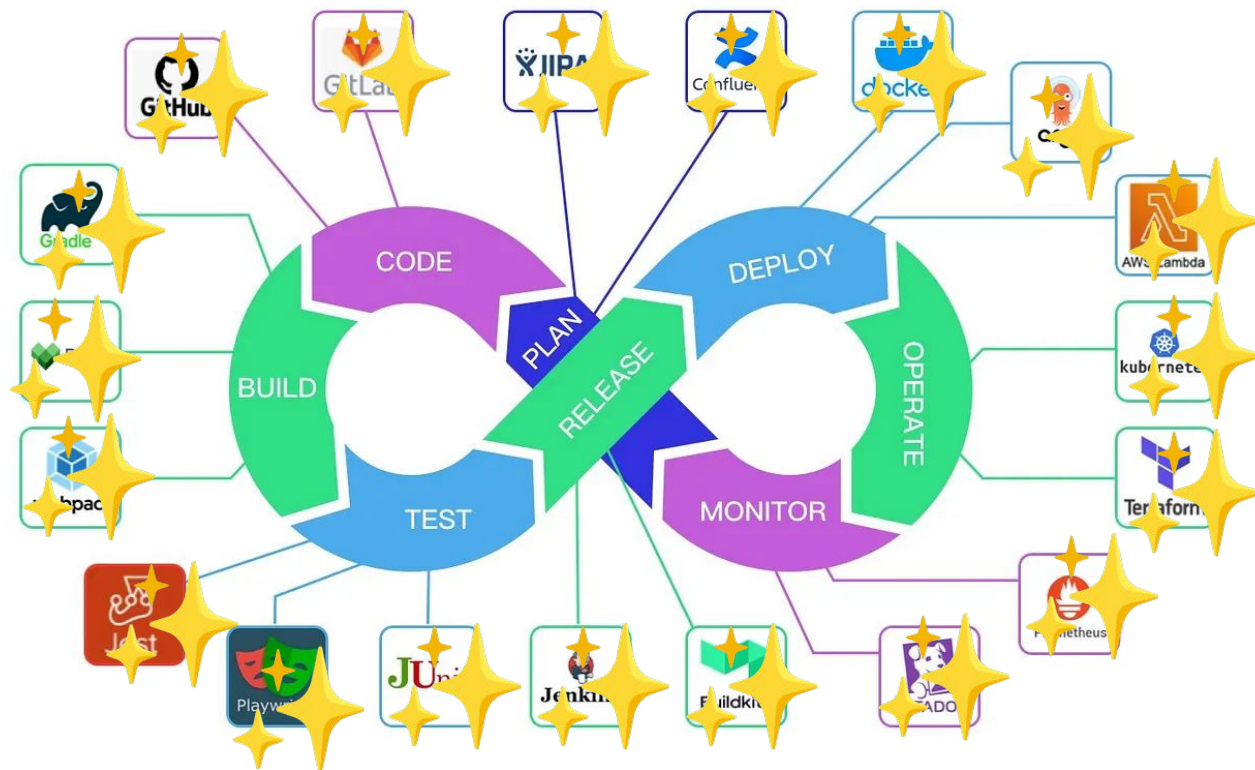

# GitHub Copilot underrepresented on social media?

The slide features several clusters of yellow starburst graphics, each containing three stars of varying sizes, scattered around the central text.

# A completely incomplete history of AI for CI/CD tools

# History of AI tools for generating code

## A decorative graphic consisting of several L-shaped brackets (corner braces) arranged in a vertical column. The brackets are colored in alternating red and blue. From top to bottom, the colors are: red, blue, blue, red, blue, red, blue, red, blue, red. Each bracket is oriented with its corner pointing towards the right.

# Models have now become commodities

Context  Fine-tuning

So where does the challenge  
live?

The challenge is now in integrations

# Why invent MCP?

Aggregates data from multiple sources, with limited complexity

Let's the models interact with different tools and systems

## What is MCP?

REST API in web dev ~= MCP in the AI ecosystem

MCP (model context protocol) is a protocol for structured transmission of precise instructions to a model to define an operation

## Operating System & Scripting

## Programming Language & GUI

## Programming Framework

## Webservices

## Cloud

## Containers

## DevOps / CI CD Tools

## Monitoring

## Database

## Testing

## Integration

## Big Data

## Data Science / AI

## RPA

## Process

but is there such a thing as too much context?

but is there such a thing as too much context?

20,000,000 LOC × 10 tokens = 200,000,000 tokens

200M tokens × \$3 / 1M  
= 200 × \$3  
= \$600

ouch...
